

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A process for producing propylene oxide, which comprises the following steps:

oxidation step: a step of obtaining cumene hydroperoxide by oxidizing cumene;

epoxidation step: a step of obtaining propylene oxide and cumyl alcohol by reacting cumene hydroperoxide obtained in the oxidation step with propylene; and

conversion step: a step of obtaining cumene by subjecting cumyl alcohol obtained in the epoxidation step to hydrogenation-containing reaction and recycling the cumene to the oxidation step,

wherein a concentration of 1,2-epoxy-2-phenylpropane contained in a reaction mixture after the oxidation step[[.]] is 1 % by weight or less.

2. (previously presented): The process according to claim 1, wherein the conversion step comprises the following steps:

dehydration step: a step of obtaining  $\alpha$ -methylstyrene by dehydrating cumyl alcohol obtained in the epoxidation step in the presence of a dehydration catalyst; and

hydrogenation step: a step of obtaining cumene by hydrogenating  $\alpha$ -methylstyrene in the presence of a hydrogenation catalyst to obtain cumene, and recycling the cumene to the oxidation step.

3. (original): The process according to claim 1, wherein the conversion step comprises the following step:

hydrogenolysis step; a step of obtaining cumene by subjecting cumyl alcohol obtained in the epoxidation step to hydrogenolysis in the presence of a hydrogenolysis catalyst, and recycling the cumene to the oxidation step as the raw material.
